keywords	
taxa	spiders
project	Possibilities for the creation of a regional forest near Ghent
supervisor	
institution	Royal Belgian Institute of Natural Sciences (KBIN), Department Entomology
document	pdf, hardcopy
data	

MATERIALS & METHODS

study area	5n (scientific zone) – soil fauna plots = level II plots
time period	1997–1998 + 26 April 1999
goal	Compare the data on the spider fauna in the Aelmoeseneie forest with spider data of other forests near Ghent
set-up	cf. De Bakker et al 2000
data collection	cf. De Bakker et al 2000
remarks	The data for the Aelmoeseneieforest are from 1997-1998; the data for the other forests are from 1999-2000

RESULTS

Seven species were only found in the Aelmoeseneie forest, not in the 4 other forests studied. Of these species, only *Coelotes terrestris* was caught in large numbers. Four Red List species were found in the Aelmoeseneie forest.

Some spider species are discussed.
