

GENERAL INFORMATION

author(s)	Tabari M, Lust N, Zahedi G
year	1999
English title	Growth and development of ash (<i>Fraxinus excelsior</i> L.) seedlings on different humus types under a closed forest canopy.
original title	
reference	Silva Gandavensis 64
pages	44–57
type	article (a3)
ecosystem service	supporting – forest dynamics
keywords	regeneration
taxa	<i>Fraxinus excelsior</i>
project	PhD Tabari
supervisor	Lust N
institution	Ghent University, Laboratory of Forestry
document	hardcopy, pdf
data	

MATERIALS & METHODS

study area	scientific zone (5n)
time period	September 1995 & September 1997
goal	Evaluation of the growth and leaf development of ash seedlings in different humus conditions under a closed forest canopy.
set-up	12 plots: 116 seedlings of 2–4 years old
data collection	collar diameter, number of leaves/branches/growth flushes root length, root/shoot ratio
remarks	

RESULTS

Growth (1995–1997)

- No difference in collar diameter growth, increase in number of leaves/branches/growth flushes between the 3 humus types.

Root length (1997)

- Root length and root/shoot ratio were larger on the mull humus types than on the mull moder
